

DECLARATION OF PERFORMANCE

No. 0083 – EN

1. Unique identification code of the product-type: **fischer-Zykon-Anchor FZA, FZA-D, FZA-I, FZA ST**

2. Intended use/es:

| Product | Intended use/es |
|---|--|
| Metal anchors for use in concrete (heavy-duty type) | Post-installed fastening in cracked or uncracked concrete, see appendix, especially Annexes B 1 to B 4 |

3. Manufacturer: **fischerwerke GmbH & Co. KG, Klaus-Fischer-Straße 1, 72178 Waldachtal, Germany**

4. Authorised representative: --

5. System/s of AVCP: **1**

6a. Harmonised standard: ---

Notified body/ies: ---

6b. European Assessment Document: **ETAG 001; 2013-04**

European Technical Assessment: **ETA-98/0004; 2016-09-12**

Technical Assessment Body: **DIBt**

Notified body/ies: **1343 – MPA Darmstadt**

7. Declared performance/s:

Mechanical resistance and stability (BWR 1)

| Essential characteristic | Performance |
|--|---|
| Characteristic resistance for static and quasi static action to tension | See appendix, especially Annexes C 1 to C 5 |
| Characteristic resistance for static and quasi static action to shear load | See appendix, especially Annexes C 6 to C 10 |
| Characteristic resistance for seismic performance category C1 | See appendix, especially Annexes C 11 to C 12 |
| Displacements | See appendix, especially Annexes C 13 to C 15 |

Safety in case of fire (BWR 2)

| Essential characteristic | Performance |
|--------------------------|--|
| Reaction to fire | Anchorage satisfy requirements for Class A 1 |
| Resistance to fire | NPD |

8. Appropriate Technical Documentation and/or Specific Technical Documentation: ---

The performance of the product identified above is in conformity with the set of declared performance/s. This declaration of performance is issued, in accordance with Regulation (EU) No 305/2011, under the sole responsibility of the manufacturer identified above.

Signed for and on behalf of the manufacturer by:

Andreas Bucher, Dipl.-Ing.

Wolfgang Hengesbach, Dipl.-Ing., Dipl.-Wirtsch.-Ing.

Tumlingen, 2016-09-16

- This DoP has been prepared in different languages. In case there is a dispute on the interpretation the english version shall always prevail.

- The Appendix includes voluntary and complementary information in English language exceeding the (language-neutrally specified) legal requirements.

Specific Part

1 Technical description of the product

The fischer-Zykon-Anchor FZA, FZA-D, FZA-I and FZA ST is an anchor made of galvanised or stainless or high corrosion resistant steel which is placed in an undercut hole and anchored by mechanical interlock with displacement-controlled installation.

The bolt projection anchor FZA and the through bolt anchor FZA-D consists of a conical bolt with external thread, an expansion sleeve and a hexagon nut with washer. The internal threaded anchor FZA-I consists of a conical bolt with internal thread and an expansion sleeve. The bold projecting anchor FZA ST consists of a conical bolt with hexagon projecting end, an expansion sleeve with colour marking, a hexagon nut with washer and a plastic sleeve.

The anchor is anchored by impact acting on the expansion sleeve over the cone bolts in the undercuts of the borehole.

The product description is given in Annex A.

2 Specification of the intended use in accordance with the applicable European Assessment Document

The performances given in Section 3 are only valid if the anchor is used in compliance with the specifications and conditions given in Annex B.

The verifications and assessment methods on which this European Technical Assessment is based lead to the assumption of a working life of the anchor of at least 50 years. The indications given on the working life cannot be interpreted as a guarantee given by the producer, but are to be regarded only as a means for choosing the right products in relation to the expected economically reasonable working life of the works.

3 Performance of the product and references to the methods used for its assessment

3.1 Mechanical resistance and stability (BWR 1)

| Essential characteristic | Performance |
|--|---------------------|
| Characteristic resistance for static and quasi static action to tension | See Annex C1 – C5 |
| Characteristic resistance for static and quasi static action to shear load | See Annex C6 – C10 |
| Characteristic resistance for seismic performance category C1 | See Annex C11 – C12 |
| Displacements | See Annex C13 - C15 |

3.2 Safety in case of fire (BWR 2)

| Essential characteristic | Performance |
|---------------------------------|---|
| Reaction to fire | Anchorage satisfy requirements for Class A1 |
| Resistance to fire | No performance determined |

3.4 Safety in use (BWR 4)

The essential characteristics regarding Safety in use are included under the Basic Works Requirement Mechanical resistance and stability.

4 Assessment and verification of constancy of performance (AVCP) system applied, with reference to its legal base

In accordance with guideline for European technical approval ETAG 001, April 2013 used as European Assessment Document (EAD) according to Article 66 Paragraph 3 of Regulation (EU) No 305/2011 the applicable European legal act is: (1996/582/EC, OJ)

The system to be applied is: 1

fischer-Zykon-Anchor FZA, FZA-D , FZA-I, FZA ST

Product description
Materials

Annex A7

Specifications of intended use

Anchorage subject to:

- Static and quasi-static loads
- Seismic Performance Category C1 sizes FZA14x40, FZA14x60, FZA18x80, FZA22x100, FZA 22x125 and FZA14x80D/20, FZA14x100D/40, FZA18x100D/20, FZA18x130D/50, FZA22x125D/25

Base materials:

- Reinforced and unreinforced normal weight concrete according to EN 206-1:2000
- Strength classes C20/25 to C50/60 according to EN 206-1:2000
- Cracked and non-cracked concrete

Use conditions (Environmental conditions):

- Structures subject to dry internal conditions
(Zinc plated steel, hot-dip galvanized steel, stainless steel, high corrosion- resistant steel)
- Structures subject to external atmospheric exposure (including industrial and marine environment) and to permanently damp internal condition, if no particular aggressive conditions exist
(stainless steel, high corrosion-resistant steel)
- Structures subject to external atmospheric exposure and permanently damp internal condition, if other particular aggressive conditions exist
(high corrosion-resistant steel)

Note: Particular aggressive conditions are e.g. permanent, alternating immersion in seawater or the splash zone of seawater, chloride atmosphere of indoor swimming pools or atmosphere with extreme chemical pollution (e.g. in desulphurization plants or road tunnels where de-icing materials are used)

Design:

- Anchorages are designed under the responsibility of an engineer experienced in anchorages and concrete work
- Verifiable calculation notes and drawings be prepared taking account of the loads to be anchored. The position of the anchor is indicated on the design drawings (e.g. position of the anchor relative to reinforcement or to supports, etc.)
- Anchorages under static or quasi-static actions be designed in accordance with (please choose the relevant design method):
 - ETAG 001, Annex C, design method A, Edition August 2010 or
 - CEN/TS 1992-4:2009, design method A
- Anchorages under seismic actions (cracked concrete) be designed in accordance with:
 - EOTA Technical Report TR 045, Edition February 2013
 - Anchorages shall be positioned outside of critical regions (e.g. plastic hinges) of the concrete structure.
 - Fastenings in stand-off installation or with a grout layer under seismic action are not allowed

Installation:

- Anchor installation carried out by appropriately qualified personnel and under the supervision of the person responsible for technical matters of the site
- Anchor must be installed to comply with the correct anchorage depth. This is assured when the front face of the sleeve, for the internal thread, is approximately 1mm below the concrete surface or, in the case of the through fixing versions, approximately 1mm below the front surface of fixture. When using the FZA 12x40 ST the knurling on the sleeve is flush or below the concrete surface

fischer Zykon Anchor FZA, FZA-I , FZA-D, FZA ST

Intended Use
Installation parameters - Minimum thickness of concrete member, minimum spacings and minimum edge distances

Annex B3

Installation instructions for FZA, FZA-D, FZA-I, FZA ST

Pre-positioned installation

1 Create a drill hole at right angles to the surface of the anchor base with a hammer drill, using the corresponding Zykron universal drill bit FZUB. The required drill depth is reached once the FZUB depth stop meets the concrete.

2 Once the FZUB depth stop meets the concrete, create the drill hole undercut by making circular swiveling movements with the hammer drill while the hammer mechanism is engaged. Press the hammer drill firmly against the anchor base: 1-2 swiveling movements are sufficient for $\varnothing 14$ mm, with 3-5 movements for $\varnothing 18$ mm and $\varnothing 22$ mm

3 Clean drill hole.

4 Insert the anchor into the drill hole and then drive the expansion sleeve in with hammer-set device FZE Plus, using a manual hammer.

5a The anchor is correctly expanded if the colour marking on the thread of the tapered bolt is visible or the gap u is fulfilled.

5b When using the FZA 12x40 ST the knurling on the sleeve is flush or below the concrete surface.

6 Mount installation object (e.g. anchor plate), washer and nut, screw (for FZA-I) or threaded rod with washer and nut (for FZA-I) and apply installation torque with torque spanner.

Push-through installation

1 Create a drill hole through the installation object at right angles to the surface of the anchor base with a hammer drill, using the corresponding Zykron universal drill bit FZUB. The required drill depth is reached once the FZUB depth stop meets the fixture.

2 Once the FZUB depth stop meets the fixture, create the drill hole undercut by making circular swiveling movements with the hammer drill while the hammer mechanism is engaged. Press the hammer drill firmly against the anchor base: 1-2 swiveling movements are sufficient for $\varnothing 14$ mm, with 3-5 movements for $\varnothing 18$ mm and $\varnothing 22$ mm

3 Clean drill hole.

4 Insert the anchor into the drill hole and then drive the expansion sleeve in with hammer-set device FZE Plus, using a manual hammer. The setting depth marking (knurl) is approx. 1mm behind the surface of the concrete.

5 The anchor is correctly expanded if the colour marking on the thread of the tapered bolt is visible.

6 Mount installation object (e.g. anchor plate), washer and nut and apply installation torque with torque spanner.

| | | 12x50 M8D/10 | 12x60 M8D/10 | 12x80 M8D/30 | 14x80 M10D/20 |
| Shear load in cracked and non-cracked concrete | V [kN] | 5,0 | 5,0 | 5,0 | 12,5 |
| Displacement | δ _{V0} [mm] | 0,7 | 0,7 | 0,7 | 1,9 |
| | δ _{V∞} [mm] | 1,0 | 1,0 | 1,0 | 2,8 |
| | | 14x100 M10D/40 | 18x100 M12D/20 | 18x130 M12D/50 | 22x125 M16D/25 |
| Shear load in cracked and non-cracked concrete | V [kN] | 12,5 | 19,0 | 19,0 | 30,0 |
| Displacement | δ _{V0} [mm] | 1,9 | 2,1 | 2,1 | 2,1 |
| | δ _{V∞} [mm] | 2,8 | 3,1 | 3,1 | 3,1 |

Table C18: Displacements due to shear loads for **internal thread anchor FZA I** (Design method A, according to **ETAG 001, Annex C** or **CEN/TS 1992-4:2009**)

| Type of anchor / size | | FZA I (internal thread anchor) | | | | | |
|--|----------------------|--------------------------------|---------------|---------------|----------------|-----------------|-----------------|
| | | 12x40 M6 I | 12x50 M6 I | 14x60 M8 I | 18x80 M10 I | 22x100 M12 I | 22x125 M12 I |
| Shear load in cracked and non-cracked concrete | V [kN] | 5,0 | 5,0 | 12,5 | 19,0 | 30,0 | 30,0 |
| Displacement | δ _{N0} [mm] | 0,7 | 0,7 | 1,9 | 2,1 | 2,1 | 2,1 |
| | δ _{N∞} [mm] | 1,0 | 1,0 | 2,8 | 3,1 | 3,1 | 3,1 |

fischer-Zykon-Anchor FZA, FZA-D , FZA-I, FZA ST
